## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference BO 42676 Bot		<b>FOR FURTHER ACTION</b> See Notification of Transmittal of International Preliminary Examination Report (Form PCT/IPEA/416)	
International application No. PCT/NL00/00574	International filing date (day/month/year) 17/08/2000	Priority date (day/month/year) 19/08/1999	
International Patent Classification (IPC) or national classification and IPC A01G9/14			
Applicant INSTITUUT VOOR MILIEU-EN AGRITECHNIEK... et al.			

1. This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 36.

2. This REPORT consists of a total of 4 sheets, including this cover sheet.

- ☐ This report is also accompanied by ANNEXES, i.e. sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).

These annexes consist of a total of sheets.

3. This report contains indications relating to the following items:

- I ☒ Basis of the report
- II ☐ Priority
- III ☐ Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- IV ☐ Lack of unity of invention
- V ☒ Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- VI ☐ Certain documents cited
- VII ☐ Certain defects in the international application
- VIII ☐ Certain observations on the international application

Date of submission of the demand  09/03/2001	Date of completion of this report  20.04.2001

# INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/NL00/00574

## I. Basis of the report

1. With regard to the **elements** of the international application (*Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)*):

**Description, pages:**

1-4 as originally filed

**Claims, No.:**

1-13 as originally filed

**Drawings, sheets:**

1/3-3/3 as originally filed

2. With regard to the **language**, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language: , which is:

- ☐ the language of a translation furnished for the purposes of the international search (under Rule 23.1(b)).
- ☐ the language of publication of the international application (under Rule 48.3(b)).
- ☐ the language of a translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- ☐ contained in the international application in written form.
- ☐ filed together with the international application in computer readable form.
- ☐ furnished subsequently to this Authority in written form.
- ☐ furnished subsequently to this Authority in computer readable form.
- ☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.
- ☐ The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4. The amendments have resulted in the cancellation of:

- ☐ the description, pages:
- ☐ the claims, Nos.:

# INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/NL00/00574

☐ the drawings, sheets:

5. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)):

*(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)*

6. Additional observations, if necessary:

## V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

### 1. Statement

Novelty (N)	Yes:	Claims	1-13
	No:	Claims	
Inventive step (IS)	Yes:	Claims	1-13
	No:	Claims	
Industrial applicability (IA)	Yes:	Claims	1-13
	No:	Claims	

### 2. Citations and explanations see separate sheet

**INTERNATIONAL PRELIMINARY  
EXAMINATION REPORT - SEPARATE SHEET**

---

International application No. PCT/NL00/00574

**Ad V**

The present application meets the requirements of Article 33 PCT.

None of the prior art documents discloses a greenhouse wherein first pairs of roof surfaces run at an angle with respect to a horizontal from a base edge oriented in the longitudinal direction of the greenhouse to a common apex and wherein second pairs of successive roof surfaces extend at an angle with respect to the horizontal from a base edge oriented in the transversal direction of the greenhouse to a common apex.

None of the prior art documents teaches or suggests that such a zigzag or ribbed pattern of the roof surfaces extending in two perpendicular directions be used in order to increase the light yield of a greenhouse.

Claims 1-13 therefore meets the requirements of Article 33(2)-(3) PCT.

Claims 1-13 is considered to be industrially applicable (Article 33(4) PCT).

31.08.00

**PCT****REQUEST**

The undersigned requests that the present international application be processed according to the Patent Cooperation Treaty.

### Box No. VIII CHECK LIST; LANGUAGE OF FILING

This international application contains the following number of sheets:

request : 4

description (excluding sequence listing part) : 4

claims : 3

abstract : 1

drawings : 3

sequence listing part of description :

Total number of sheets : 15

This international application is accompanied by the item(s) marked below:

- ☒ fee calculation sheet
- ☐ separate signed power of attorney
- ☐ copy of general power of attorney; reference number, if any:
- ☐ statement explaining lack of signature
- ☐ priority document(s) identified in Box No. VI as item(s):
- ☐ translation of international application into (language):
- ☐ separate indications concerning deposited microorganism or other biological material
- ☐ nucleotide and/or amino acid sequence listing in computer readable form
- ☒ other (specify): Copy search report

Kas alsmede kapelement voor een dergelijke kas met een verhoogde lichttransmissie.

De uitvinding heeft betrekking op een kas met een lichtdoorlatende kapconstructie met een langsrichting en een loodrecht daarop gelegen dwarsrichting, met verscheidene in de dwarsrichting opeenvolgende paren eerste kapvlakken, waarbij de eerste kapvlakken van een voorafbepaald paar zich ten opzichte van een horizontaal onder een hoek uitstrekken vanaf een, in de langsrichting van de kas georiënteerde basisrand, naar een gemeenschappelijke nok. De uitvinding heeft tevens betrekking op een kapelement voor toepassing in een dergelijke kas.

Uit de publicatie "Second International Symposium on Models for Plantgrowth", environmental control and farm management in protected cultivation, number 456, March 1998 is bekend om tuinbouwkassen te voorzien van in de dwarsrichting opeenvolgende puntvormig naar een nok toe verlopende kapvlakken. Voor hoeken met de horizontaal groter dan  $45^\circ$  blijkt de lichttransmissie voor loodrecht op de kas invallende stralen sterk toe te nemen. Dit is met name in tuinbouwkassen van belang aangezien één procent meer lichtopbrengst resulteert in ca. één procent meer opbrengst aan gewassen.

Het is een doel van de onderhavige uitvinding te voorzien in een kapconstructie van de bovengenoemde soort, voorzien van de hoeveelheid aaneengeleggen in een nok samenkomende paren kapvlakken, waarbij de lichtdoorlatendheid wordt verhoogd.

Hiertoe is de kapconstructie volgens de onderhavige uitvinding gekenmerkt doordat de kas tevens in de langsrichting is voorzien van paren opeenvolgende tweede kapvlakken die zich ten opzichte van de horizontaal onder een hoek uitstrekken vanaf een, in de dwarsrichting van kas georiënteerde basisrand naar een gemeenschappelijke nok.

Gebleken is dat een zich in twee loodrechte richtingen uitstrekkend zigzag- of ribbelpatroon van de kapvlakken de lichtopbrengst met 10% - 20% kan verhogen ten opzichte van kapconstructies die uitsluitend in de dwarsrichting zigzagvormig zijn uitgevoerd. In een eerste uitvoeringsvorm vormen de paren kapvlakken piramides die langs hun zijden onderling zijn verbonden tot een aaneengesloten kapconstructie.

In een andere uitvoeringsvorm van een kas volgens de uitvinding raken de paren eerste kapvlakken elkaar langs nokranden, waarbij basisranden en de nokranden van de paren eerste kapvlakken zich onderling parallel in de langsrichting uitstrekken, waarbij

de paren tweede kapvlakken elkaar langs nokranden raken, en waarbij de basisranden en de nokranden van de tweede paren kapvlakken zich onderling parallel uitstrekken vanaf een basisrand van een eerste kapvlak naar de nokrand van het desbetreffende eerste kapvlak. Hierdoor worden in de langsrichting van de kas opeenvolgende  
5 dwarsribbels gevormd.

Het verdient de voorkeur om kapelementen met een zigzagpatroon dubbelwandig als kanaalplaat uit te voeren zodat enerzijds een voldoende sterkte en isolerende werking van de kapconstructie wordt verkregen terwijl anderzijds de lichtdoorlatendheid wordt vergroot. De dubbelwandige kapelementen omvatten een  
10 basisvlak uit bijvoorbeeld polycarbonaat met een dikte van 0,8 mm waarop een zigzagvormige plaat met ribbels met een hoogte van ca 20 mm is bevestigd. Bij voorkeur wordt het dubbelwandige kapelement uit één stuk gevormd. De kapelementen kunnen modulair zijn uitgevoerd en zijn voorzien van koppelmiddelen voor verbinding met gelijkvormige kapelementen.

15 Een kas volgens de onderhavige uitvinding alsmede een kapelement zullen nader worden toegelicht aan de hand van de bijgevoegde tekening. In de tekening toont:

figuur 1 een schematisch perspectivisch aanzicht van een kap met een in de dwarsrichting en langsrichting zigzagvormige kapconstructie,

figuur 2 een schematisch perspectivisch aanzicht van een kapconstructie  
20 gevormd uit een reeks piramides,

figuur 3 een dwarsdoorsnede van een dubbelwandig kapelement in de vorm van een kanaalplaat volgens de onderhavige uitvinding,

figuur 4 een alternatieve uitvoeringsvorm van een dubbelwandig kapelement in de vorm van een kanaalplaat volgens de uitvinding,

25 figuur 5 een dubbelwandig kapelement gevormd door een reeks piramides, en

figuur 6 een tweetal kapelementen onderling verbonden door middel van koppelmiddelen.

Figuur 1 toont een kas 1, zoals bijvoorbeeld een kas van het Venlo-type met een lichtdoorlatende kapconstructie 2. De kapconstructie 2 is afgesteund op staanders 3 en  
30 horizontale vakwerkliggers 4, die hierin slechts schematisch zijn weergegeven. De hoogte a van een kas zoals getoond in figuur 1 bedraagt bijvoorbeeld 4 m, terwijl de breedte,  $d_1$  in de dwarsrichting D, 8 m bedraagt bij een lengte in langsrichting L van bijvoorbeeld 100 m. De kapconstructie 2 omvat paren eerste kapvlakken 5, 6; 7, 8 die

vanaf een basisrand 11, 11', 11" onder een hoek  $\theta$  van ca.  $20^\circ$  ten opzichte van de horizontaal verlopen en die onderling zijn bevestigd langs een respectieve nok 9, 10. De hoogte  $h_1$  van de nok 9,10 boven de vakwerkligger 4 bedraagt bijvoorbeeld 1,45 m. In de langsrichting L zijn de paren kapvlakken 5, 6; 7, 8 voorzien van dwarsribbels, gevormd door paren tweede kapvlakken 12,13;14,15. De kapvlakken 12, 13; 14, 15 strekken zich onder een hoek  $\gamma$  uit vanaf basisranden 18, 19; 20, 21 en zijn onderling verbonden langs nokranden 16,17. De afstand  $d_2$  tussen de basisranden 18, 19, 20, 21 van de paren tweede kapvlakken 12, 13; 14, 15 bedraagt bijvoorbeeld 2 cm terwijl de hoogte  $h_2$  van de nokrand 16,17 boven het vlak van de basisranden 18, 19; 20, 21 1,7 cm bedraagt. Door het aanbrengen van de paren zigzagvormige tweede kapvlakken 12, 13; 14, 15 wordt de lichtopbrengst met ca. 10 % verhoogd voor een enkellaags kapconstructie en met ca. 20% voor een dubbellaags kapconstructie zoals wordt getoond in figuur 3 en figuur 4, ten opzichte van bekende kassen waarbij slechts paren eerste kapvlakken 5, 6; 7, 8 aanwezig zijn.

Figuur 2 toont een uitvoeringsvorm van een kas 28 met een kapconstructie 29 waarbij de basisranden 30, 31, 32, 33 van paren eerste kapvlakken 34,35 en paren tweede kapvlakken 36,37 aaneenliggende rechthoeken begrenzen waarboven de kapvlakken 34, 35; 36, 37 in een nok 38 samenkomen zodat een veelheid van piramides 39, 40 wordt gevormd voor vergroting van de lichtopbrengst. Hierbij bedraagt de lengte van de basisranden 31, 32 ca. 1 m, terwijl de hoogte van de piramides 1,7 m bedraagt.

Figuur 3 toont een uitvoeringsvorm van een dubbelwandig kapelement 50 in de vorm van een kanaalplaat met een basisplaat 51 en paren kapvlakken 52, 53, 54, 55 die onderling langs zich loodrecht op het vlak van tekening uitstreckende nokranden 56, 57 zijn verbonden. Via tussenschotten 58, 59, zijn de basisranden 60, 61, 62, 63 verbonden met de basisplaat 51. De dikte  $b_1$  van de basisplaat bedraagt bijvoorbeeld 0,8 mm, de dikte  $b_2$  van de vlakken 52, 53, 54, 55 bedraagt bijvoorbeeld 1 mm, de hoogte  $h_3$  bedraagt bijvoorbeeld 28 mm terwijl de afstand  $d_3$  tussen de basisranden 60, 61, 62, 65  $d_3$ , bijvoorbeeld 16 mm bedraagt. De hoogte  $h_5$  bedraagt 13,9 mm.

De hoek  $\theta$  van de kapvlakken 52, 53, 54, 55 met de horizontaal bedraagt  $60^\circ$ . Het materiaal van het dubbelwandige kapelement 50 is bijvoorbeeld polycarbonaat, maar dit element kan eveneens worden gevormd uit iedere andere geschikte transparante kunststof.

Figuur 4 toont een alternatieve uitvoeringsvorm van een dubbelwandig kapelement 70 met een onder een hoek geplaatste kapvlakken 71, 72 en een eveneens onder een hoek geplaatste basisvlakken 73, 74 welke onderling zijn verbonden door tussenschotten 75, 76, 77. De dikte  $b_3$  van de kapvlakken 71, 72 bedraagt bijvoorbeeld 1 mm, de afstand  $h_4$  tussen de kapvlakken 71, 72 en de basisvlakken 73, 74 bedraagt bijvoorbeeld 20 mm, de dikte  $b_4$  van het tussenschot 77 bedraagt bijvoorbeeld 0,8 mm. De afstand  $d_4$  tussen de basisranden 78, 79 bedraagt bijvoorbeeld 30 mm.

Figuur 5 toont een uitvoeringsvorm van een uit één deel transparante kunststof gevormd kapelement 80 met een basisplaat 81. Langs vier basisranden 86,87,88,89 van de basisplaat 81 strekken zich vier oppervlakken 82,83,84,85 uit naar een gemeenschappelijk nok 90. Op deze wijze wordt een veelheid van regelmatig over de basisplaat 81 verdeelde piramides gevormd. Hierbij bedraagt de lengte van de basisranden 86,87,88,89 bijvoorbeeld 1,5 m, en is de afstand van de nok 90 tot de basisplaat 81 2,6 m.

Figuur 6 toont tenslotte twee kapelementen 90, 91 die onderling zijn verbonden via complementaire bevestigingsmiddelen 92, 93 die op eenvoudige wijze ineengrijpen en op modulaire wijze een kapconstructie volgens de onderhavige uitvinding vormen.

## Conclusies

1. Kas (1,28) omvattende een lichtdoorlatende kapconstructie (2, 29) met een  
langsrichting (L) en een loodrecht daarop gelegen dwarsrichting (D) met verscheidene  
5 in de dwarsrichting (D) opeenvolgende paren eerste kapvlakken (5,6,7,8,36,37),  
waarbij de eerste kapvlakken van een voorafbepaald paar zich ten opzichte van een  
horizontaal onder een hoek ( $\theta$ ) uitstrekken vanaf een in de langsrichting (L) van de kas  
georiënteerde basisrand (11,11',11'',30,33), naar een gemeenschappelijke nok (9,10,38),  
met het kenmerk, dat de kas in de langsrichting (L) is voorzien van paren  
10 opeenvolgende tweede kapvlakken (12,13,14,15;34,35) die zich ten opzichte van de  
horizontaal onder een hoek ( $\gamma$ ) uitstrekken vanaf een, in de dwarsrichting D van kas  
georiënteerde basisrand (18,19,20,21;31,32) naar een gemeenschappelijke nok  
(16,17,38).
- 15 2. Kas (28) volgens conclusie 1, met het kenmerk, dat vier onderling aangrenzende,  
loodrechte basisranden (30,31,32,33) telkens een vierhoek begrenzen, waarbij de  
vierhoeken zich opeenvolgend in de langsrichting (L) en de dwarsrichting (D) van de  
kapconstructie uitstrekken, en waarbij voor iedere vierhoek eerste en tweede paren  
kapvlakken (34,35,36,37) zich vanaf de basisranden (30,31,32,33) naar een  
20 gemeenschappelijke, boven de respectieve vierhoek gelegen nok (38), uitstrekken.
3. Kas (1) volgens conclusie 1 met het kenmerk, dat de paren eerste kapvlakken  
(5,6,7,8) elkaar langs nokranden (9,10) raken, waarbij de basisranden (11,11',11'') en de  
nokranden (9,10) van de paren eerste kapvlakken (5,6,7,8) zich onderling parallel in de  
25 langsrichting (L) uitstrekken, waarbij de paren tweede kapvlakken (12,13,14,15) elkaar  
langs nokranden (16,17) raken, en waarbij de basisranden (18,19,20,21) en de  
nokranden (16,17) van de tweede paren kapvlakken (12,13,14,15) zich onderling  
parallel uitstrekken vanaf een basisrand (11,11',11'') van een eerste kapvlak (5,6,7,8)  
naar de nokrand (9,10) van het desbetreffende eerste kapvlak.
- 30 4. Kas (1,28) volgens een der voorgaande conclusies, met het kenmerk, dat de  
kapvlakken (52, 53, 54, 55) dubbelwandig zijn uitgevoerd met een basisplaat (51, 73,

74) en dwarsverbindingen (58, 59, 75, 76, 77), tussen de nokpunten en/of de basisranden (60, 61, 62, 63, 78, 79) van de kapvlakken en de basisplaat.

5. Kas (1,28) volgens conclusie 3 of 4, met het kenmerk, dat een afstand (d2,d3,d4) tussen de basisranden (18,19,20,21,78, 79) van de paren tweede kapvlakken (12,13,14,15,71, 72) tussen 0,5 en 0,001 maal de afstand (d1) tussen de basisranden (11,11',11'') van de paren eerste kapvlakken (5,6,7,8) bedraagt.
6. Kas (1,28) volgens conclusie 3, 4 of 5, met het kenmerk, dat een loodrechte afstand (h2,h5) tussen de nokrand (16,17,27,28) en de basisranden (18,19,20,21,60, 61, 62, 63) van de paren tweede kapvlakken tussen 0,5 en 0,001 maal de loodrechte afstand tussen de nokrand (9,10) en de basisranden (11,11',11'') van de paren eerste kapvlakken (5,6,7,8) bedraagt.
7. Kapelement (50, 80) voor toepassing in een kas, voorzien van verscheidene in een dwarsrichting (D) opeenvolgende paren kapvlakken (52, 53, 54, 55,82,83) en een basisplaat (51,81), waarbij de kapvlakken van een voorafbepaald paar zich ten opzichte van de basisplaats onder een hoek ( $\theta$ ) uitstrekken vanaf een, in een langsrichting (L) georiënteerde basisrand ( 60, 61, 62, 63,86,88) naar een gemeenschappelijke nok (56, 57,90), welke kapvlakken ( 52, 53, 54, 55,82,83) langs de basisranden en/of ter plaatse van de nok zijn verbonden met de basisplaat.
8. Kapelement (80) volgens conclusie 7, met het kenmerk, dat het kapelement verder is voorzien van in een langsrichting (L) opeenvolgende paren tweede kapvlakken (84,85) die zich ten opzichte van de basisplaat (81) onder een hoek uitstrekken vanaf een, in een dwarsrichting (D) georiënteerde basisrand (87,89) naar een gemeenschappelijke nok (90), waarbij vier onderling loodrechte basisranden (86,87,88,89) telkens een vierhoek begrenzen, waarbij de vierhoeken zich opeenvolgend in de langsrichting (L) en de dwarsrichting (D) van de basisplaat (81) uitstrekken, en waarbij voor iedere vierhoek eerste en tweede paren kapvlakken (82,83,84,85) zich vanaf de basisranden (86,87,88,89) naar een gemeenschappelijke, boven de respectieve vierhoek gelegen nok (90), uitstrekken.

9. Kapelement (50,80) volgens conclusie 7 of 8, met het kenmerk, dat een afstand tussen de basisplaat (51,81) en de nok (56, 57,90) tussen 1 cm en 10 cm bedraagt, bij voorkeur tussen 1,5 cm en 3 cm.
- 5 10 Kapelement (50,80) volgens conclusie 7,8 of 9, met het kenmerk, dat de afstand (d3,d4) tussen de basisranden tussen 1 cm en 10 cm bedraagt, bij voorkeur tussen 1,5 cm en 3 cm.
11. Kapelement (50,80) volgens conclusie 7,8,9 of 10, met het kenmerk, dat de hoek  
10 ( $\theta$ ) van de kapvlakken tussen 30° en 75° bedraagt, bij voorkeur tussen 45° en 75° .
12. Kapelement (50,80) volgens een der conclusies 7 tot 11, met het kenmerk, dat het kapelement uit één deel bestaat en is gevormd uit transparante kunststof met een wanddikte tussen 0,5 mm en 5 mm, bij voorkeur tussen 0,5 mm en 2 mm.
- 15
14. Kapelement (76,77) volgens een der conclusies 7 tot 13, met het kenmerk dat het kapelement is voorzien van koppelmiddelen (78,79) voor verbinding met een gelijkvormig kapelement.

## Uittreksel

De uitvinding heeft betrekking op een kas (1) voorzien van een kapelement (2) met een veelheid van dwarsribbels (12,13,14,15) of gelijkmatig over het kapelement verdeelde  
5 piramides. Het kapelement kan dubbelwandig als kanaalplaat zijn uitgevoerd uit transparante kunststof en kan een basisplaat omvatten met daarop bevestigd de ribbelvormige of piramidevormige kapvlakken. Met de kapelementen volgens onderhavige uitvinding kan de lichtopbrengst in een tuinbouwkas worden verhoogd.

This International Search Report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This International Search Report consists of a total of 2 sheets.

It is also accompanied by a copy of each prior art document cited in this report.

**1. Basis of the report**

- a. With regard to the **language**, the international search was carried out on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

the international search was carried out on the basis of a translation of the international application furnished to this Authority (Rule 23.1(b)).

- b. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international search was carried out on the basis of the sequence listing :

contained in the international application in written form.

filed together with the international application in computer readable form.

furnished subsequently to this Authority in written form.

furnished subsequently to this Authority in computer readable form.

the statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.

the statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished

2. ☐ **Certain claims were found unsearchable** (See Box I).

3. ☐ **Unity of Invention is lacking** (see Box II).

4. With regard to the **title**,

the text is approved as submitted by the applicant.

the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

the text is approved as submitted by the applicant.

the text has been established, according to Rule 38.2(b), by this Authority as it appears in Box III. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. The figure of the **drawings** to be published with the abstract is Figure No.

as suggested by the applicant.

because the applicant failed to suggest a figure.

because this figure better characterizes the invention.

(54) Title: **GREENHOUSE AS WELL AS ROOF ELEMENT FOR SUCH A GREENHOUSE HAVING INCREASED LIGHT TRANSMISSION**

(57) Abstract: The invention relates to a greenhouse (1) provided with a roof element (2) having a multiplicity of transverse ribs (12, 13, 14, 15) or pyramids uniformly distributed over the roof element. The roof element can be constructed double-walled as a hollow-core sheet from transparent plastic and can comprise a base sheet with the rib-shaped or pyramid-shaped roof surfaces fixed thereon. The light yield in a horticultural greenhouse can be increased by means of the roof elements according to the present invention.

Greenhouse as well as roof element for such a greenhouse having increased light transmission

The invention relates to a greenhouse having a transparent roof construction with a longitudinal direction and a transverse direction located perpendicularly thereto, having various pairs of first roof surfaces in succession in the transverse direction, the first roof surfaces of a predetermined pair running at an angle with respect to a horizontal from a base edge oriented in the longitudinal direction of the greenhouse to a common apex. The invention also relates to a roof element for use in such a greenhouse.

It is known from the publication entitled "Second International Symposium on Models for Plant Growth", Environmental Control and Farm Management in Protected Cultivation, number 456, March 1998, to provide horticultural greenhouses with roof surfaces in succession in the transverse direction which run in the shape of a point towards an apex. For angles to the horizontal of greater than 45° the light transmission for radiation which is incident perpendicularly on the greenhouse is found to increase substantially. This is particularly important in horticultural greenhouses since one per cent more light yield results in approximately one per cent more yield of crops.

An aim of the present invention is to provide a roof construction of the above-mentioned type, provided with a quantity of pairs of roof surfaces which are laid in contact with one another and come together in an apex, the light transmission being increased.

To this end the roof construction according to the present invention is characterised in that the greenhouse is also provided with pairs of successive second roof surfaces in the longitudinal direction, which second roof surfaces run at an angle with respect to the horizontal from a base edge oriented in the transverse direction of the greenhouse to a common apex.

It has been found that a zigzag or ribbed pattern of the roof surfaces extending in two perpendicular directions is able to increase the light yield by 10%-20% compared with roof constructions which are of zigzag construction only in the transverse direction. In a first embodiment the pairs of roof surfaces form pyramids which are joined to one another along their sides to give a continuous roof construction.

In another embodiment of a greenhouse according to the invention the pairs of first roof surfaces are in contact with one another along edges at the apex, wherein base edges and the edges at the apex of the pairs of first roof surfaces extend parallel to one another in

the longitudinal direction, wherein the pairs of second roof surfaces are in contact with one another along edges at the apex and wherein the base edges and the edges at the apex of the second pairs of roof surfaces extend parallel to one another from a base edge of a first roof surface to the edge at the apex of the first roof surface concerned. By this means successive transverse ribs are formed in the longitudinal direction of the greenhouse.

It is preferable to construct roof elements with a zigzag pattern double-walled as a hollow-core sheet so that, on the one hand, adequate strength and insulating effect of the roof construction is obtained whilst, on the other hand, the light transmission is increased. The double-walled roof elements comprise a base surface made of, for example, polycarbonate with a thickness of 0.8 mm on which a zigzag-shaped sheet with ribs approximately 20 mm high is fixed. Preferably, the double-walled roof element is made in one piece. The roof elements can be of modular construction and are provided with coupling means for joining to similar roof elements.

A greenhouse according to the present invention and a roof element will be explained in more detail below with reference to the appended drawing. In the drawing:

Figure 1 shows a diagrammatic, perspective view of a roof with a roof construction that is in zigzag form in the transverse direction and the longitudinal direction,

Figure 2 shows a diagrammatic, perspective view of a roof construction formed from a series of pyramids,

Figure 3 shows a cross-section of a double-walled roof element in the form of a hollow-core sheet according to the present invention,

Figure 4 shows an alternative embodiment of a double-walled roof element in the form of a hollow-core sheet according to the invention,

Figure 5 shows a double-walled roof element formed by a series of pyramids, and

Figure 6 shows two roof elements joined to one another by means of coupling means.

Figure 1 shows a greenhouse 1, such as, for example, a greenhouse of the Venlo type having a transparent roof construction 2. The roof construction 2 is supported on uprights 3 and horizontal lattice girders 4, which are shown here diagrammatically only. The height  $a$  of a greenhouse as shown in Figure 1 is, for example, 4 m, whilst the width,  $d$ , in the transverse direction  $D$ , is 8 m for a length in the longitudinal direction  $L$  of, for example, 100 m. The roof construction 2 comprises pairs of first roof surfaces 5, 6; 7, 8, which run from a base edge 11, 11', 11'' at an angle  $\theta$  of approximately  $20^\circ$  with respect to the horizontal and which are fixed to one another along a respective apex 9, 10. The height  $h$ ,

of the apex 9, 10 above the lattice girder 4 is, for example, 1.45 m. In the longitudinal direction L the pairs of roof surfaces 5, 6; 7, 8 are provided with transverse ribs, formed by pairs of second roof surfaces 12, 13; 14, 15. The roof surfaces 12, 13; 14, 15 run at an angle  $\gamma$  from base edges 18, 19; 20, 21 and are joined to one another along edges at the apex 16, 17. The distance  $d_2$  between the base edges 18, 19; 20, 21 of the pairs of second roof surfaces 12, 13; 14, 15 is, for example, 2 cm, whilst the height  $h_2$  of the edge at the apex 16, 17 above the plane of the base edges 18, 19; 20, 21 is 1.7 cm. As a result of fitting the pairs of zigzag-shaped second roof surfaces 12, 13; 14, 15 the light yield is increased by approximately 10% for a single layer roof construction and by approximately 20% for a double layer roof construction as is shown in Figure 3 and Figure 4, compared with known greenhouses where only pairs of first roof surfaces 5, 6; 7, 8 are present.

Figure 2 shows an embodiment of a greenhouse 28 having a roof construction 29 in which the base edges 30, 31, 32, 33 of pairs of first roof surfaces 34, 35 and pairs of second roof surfaces 36, 37 delimit rectangles in contact with one another, above which the roof surfaces 34, 35; 36, 37 come together in an apex 38, so that a multiplicity of pyramids 39, 40 is formed to increase the light yield. Here the length of the base edges 31, 32 is approximately 1 m, whilst the height of the pyramids is 1.7 m.

Figure 3 shows an embodiment of a double-walled roof element 50 in the form of a hollow-core sheet having a base sheet 51 and pairs of roof surfaces 52, 53, 54, 55 which are joined to one another along edges at the apex 56, 57 extending perpendicularly to the plane of the drawing. The base edges 60, 61, 62, 63 are joined via partitions 58, 59 to the base sheet 1. The thickness  $b_1$  of the base sheet is, for example, 0.8 mm, the thickness  $b_2$  of the surfaces 52, 53, 54, 55 is, for example, 1 mm, the height  $h_3$  is, for example, 28 mm, whilst the distance  $d_3$  between the base edges 60, 61, 62, 65 is, for example, 16 mm. The height  $h_3$  is 13.9 mm.

The angle  $\theta$  of the roof surfaces 52, 53, 54, 55 to the horizontal is  $60^\circ$ . The material of the double-walled roof element 50 is, for example, polycarbonate, but this element can also be made from any other suitable transparent plastic.

Figure 4 shows an alternative embodiment of a double-walled roof element 70 having roof surfaces 71, 72, which are positioned at an angle, and base surfaces 73, 74, which are likewise positioned at an angle and which are joined to one another by partitions 75, 76, 77. The thickness  $b_3$  of the roof surfaces 71, 72 is, for example, 1 mm, the distance  $h_4$  between the roof surfaces 71, 72 and the base surfaces 73, 74 is, for example, 20 mm and

the thickness  $b_4$  of the partition 77 is, for example, 0.8 mm. The distance  $d_4$  between the base edges 78, 79 is, for example, 30 mm.

Figure 5 shows an embodiment of a roof element 80 made from one piece of transparent plastic and having a base sheet 81. Four surfaces 82, 83, 84, 85 extend along  
5 four base edges 86, 87, 88, 89 of the base sheet 81 to a common apex 90. In this way a multiplicity of pyramids uniformly distributed over the base sheet 81 are formed. Here the length of the base edges 86, 87, 88, 89 is, for example, 1.5 m and the distance from the apex 90 to the base sheet 81 is 2.6 m.

Finally, Figure 6 shows two roof elements 90, 91 which are joined to one another via  
10 complementary fixing means 92, 93 which engage in a simple manner and in modular fashion form a roof construction according to the present invention.

## Claims

1. Greenhouse (1,28) comprising a transparent roof construction (2,29) with a longitudinal direction (L) and a transverse direction (D) located perpendicularly thereto, having various pairs of first roof surfaces (5,6,7,8,36,37) in succession in the transverse direction (D), the first roof surfaces of a predetermined pair running at an angle ( $\theta$ ) with respect to a horizontal from a base edge (11,11',11'',30,33) oriented in the longitudinal direction (L) of the greenhouse to a common apex (9,10,38), characterised in that the greenhouse is provided with pairs of successive second roof surfaces (12,13,14,15;34,35) in the longitudinal direction (L), which second roof surfaces extend at an angle ( $\gamma$ ) with respect to the horizontal from a base edge (18,19,20,21;31,32) oriented in the transverse direction (D) of the greenhouse to a common apex (16,17,38).

2. Greenhouse (28) according to Claim 1, characterised in that four mutually adjoining perpendicular base edges (30,31,32,33) each time delimit a rectangle, wherein the rectangles extend successively in the longitudinal direction (L) and the transverse direction (D) of the roof construction and wherein, for each rectangle, first and second pairs of roof surfaces (34,35,36,37) extend from the base edges (30,31,32,33) to a common apex (38) located above the rectangle concerned.

3. Greenhouse (1) according to Claim 1, characterised in that the pairs of first roof surfaces (5,6,7,8) are in contact with one another along edges at the apex (9,10), wherein the base edges (11,11',11'') and the edges at the apex (9,10) of the pairs of first roof surfaces (5,6,7,8) extend parallel to one another in the longitudinal direction (L), wherein the pairs of second roof surfaces (12,13,14,15) are in contact with one another along edges at the apex (16,17) and wherein the base edges (18,19,20,21) and the edges at the apex (16,17) of the second pairs of roof surfaces (12,13,14,15) extend parallel to one another from a base edge (11,11',11'') of a first roof surface (5,6,7,8) to the edge at the apex (9,10) of the first roof surface concerned.

4. Greenhouse (1,28) according to one of the preceding claims, characterised in that the roof surfaces (52,53,54,55) are of double-walled construction, having a base sheet (51,73,74) and transverse links (58,59,75,76,77) between the points of the apexes and/or

the base edges (60,61,62,63,78,79) of the roof surfaces and the base sheet.

5 5. Greenhouse (1,28) according to Claim 3 or 4, characterised in that a distance ( $d_2, d_3, d_4$ ) between the base edges (18,19,20,21,78,79) of the pairs of second roof surfaces (12,13,14,15,71,72) is between 0.5 and 0.001 times the distance ( $d_1$ ) between the base edges (11,11',11'') of the pairs of first roof surfaces (5,6,7,8).

10 6. Greenhouse (1,28) according to Claim 3, 4 or 5, characterised in that a perpendicular distance ( $h_2, h_3$ ) between the edge at the apex (16,17,27,28) and the base edges (18,19,20,21,60,61,62,63) of the pairs of second roof surfaces is between 0.5 and 0.001 times the perpendicular distance between the edge at the apex (9,10) and the base edges (11,11',11'') of the pairs of first roof surfaces (5,6,7,8).

15 7. Roof element (50,80) for use in a greenhouse, provided with various pairs of roof surfaces (52,53,54,55,82,83) in succession in a transverse direction (D) and a base sheet (51,81), wherein the roof surfaces of a predetermined pair run at an angle ( $\theta$ ) with respect to the base sheet from a base edge (60,61,62,63,86,88) oriented in a longitudinal direction (L) to a common apex (56,57,90), which roof surfaces (52,53,54, 55,82,83) are joined to the base sheet along the base edges and/or at the location of the apex.

20

8. Roof element (80) according to Claim 7, characterised in that the roof element is furthermore provided with pairs of second roof surfaces (84,85) in succession in a longitudinal direction (L) which run at an angle with respect to the base sheet (81) from a base edge (87,89) oriented in a transverse direction (D) to a common apex (90), wherein  
25 four base edges (86,87,88,89) perpendicular to one another always delimit a rectangle, wherein the rectangles extend successively in the longitudinal direction (L) and the transverse direction (D) of the base sheet (81) and wherein, for each rectangle, first and second pairs of roof surfaces (82,83,84,85) extend from the base edges (86,87,88,89) to a common apex (90) located above the rectangle concerned.

30

9. Roof element (50,80) according to Claim 7 or 8, characterised in that a distance between the base sheet (51,81) and the apex (56,57,90) is between 1 cm and 10 cm, preferably between 1.5 cm and 3 cm.

10. Roof element (50,80) according to Claim 7, 8 or 9, characterised in that the distance ( $d_3, d_4$ ) between the base edges is between 1 cm and 10 cm, preferably between 1.5 cm and 3 cm.

5

11. Roof element (50,80) according to Claim 7, 8 or 9, characterised in that the angle ( $\theta$ ) of the roof surfaces is between  $30^\circ$  and  $75^\circ$ , preferably between  $45^\circ$  and  $75^\circ$ .

12. Roof element (50,80) according to one of Claims 7 to 11, characterised in that the  
10 roof element consists of one piece and is made from transparent plastic having a wall thickness of between 0.5 mm and 5 mm, preferably between 0.5 mm and 2 mm.

13. Roof element (76,77) according to one of Claims 7 to 12, characterised in that the roof element is provided with coupling means (78,79) for joining to a similar roof element.
